HOW TAKE MEASURES
STEP BY STEP GUIDE

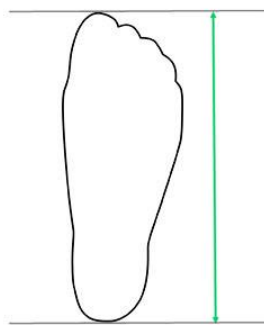

FOOT MEASURES

1.

Put your foot on the paper and draw your outline.

2.

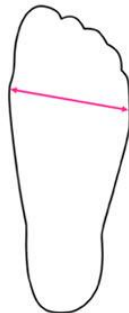

Once the drawing is done we take the measures.

Make a perpendicular line of the foot on the top and bottom of the foot.

This measure is your length.

3.

To know the width, we take the widest points of the foot and draw a line.

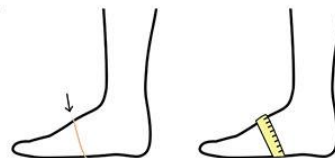

This measure is your width.

4.

Identify the widest part of your foot and encircle it with the sewing meter to measure.
This is your width circumference.

5.

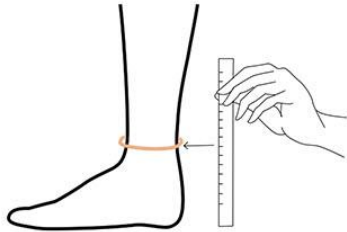

Repeat the previous step with reference to the instep.
(The highest point on the center of your foot)
This is your instep circumference.

LEG MEASURES

These measures can be taken by oneself, but you may need someone to help to make it easier.

1.

HEIGHT FROM FLOOR:

To have a referral from your measurements, identifies the height from the floor point to measure leg. You can do it with a rule or a meter sewing.

2.

CIRCUMFERENCE:

Measure the different contours of leg every 10 cm, encircling your leg with the meter sewing.

3.

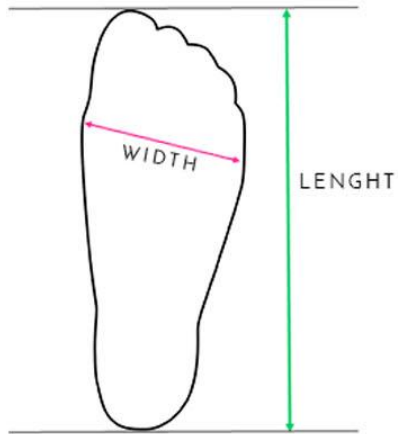

Repeat the previous steps with all your leg.

All measurements given ease in manufacturing. It is not necessary but you can also attach measures the most significant points for your boots as: ankle, calf, knee or thigh.

DRAW YOUR FOOT SILHOUETTE:
